### Decoder

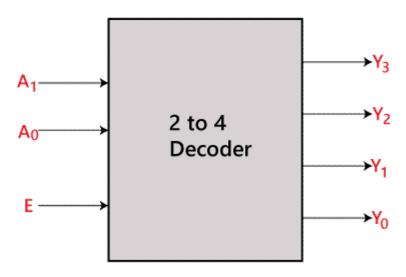

The combinational circuit that change the binary information into 2<sup>N</sup> output lines is known as **Decoders**. The binary information is passed in the form of N input lines. The output lines define the 2<sup>N</sup>-bit code for the binary information. In simple words, the **Decoder** performs the reverse operation of the **Encoder**. At a time, only one input line is activated for simplicity. The produced 2<sup>N</sup>-bit output code is equivalent to the binary information.

There are various types of decoders which are as follows:

# 2 to 4 line decoder:

In the 2 to 4 line decoder, there is a total of three inputs, i.e.,  $A_0$ , and  $A_1$  and E and four outputs, i.e.,  $Y_0$ ,  $Y_1$ ,  $Y_2$ , and  $Y_3$ . For each combination of inputs, when the enable 'E' is set to 1, one of these four outputs will be 1. The block diagram and the truth table of the 2 to 4 line decoder are given below. Block Diagram:

# **Truth Table:**

| Enable | INP            | UTS            | OUTPUTS        |                |                |    |  |  |  |  |  |
|--------|----------------|----------------|----------------|----------------|----------------|----|--|--|--|--|--|
| E      | A <sub>1</sub> | A <sub>0</sub> | Υ <sub>3</sub> | Y <sub>2</sub> | Υ <sub>1</sub> | Yo |  |  |  |  |  |
| 0      | Х              | Х              | 0              | 0              | 0              | 0  |  |  |  |  |  |
| 1      | 0              | 0              | 0              | 0              | 0              | 1  |  |  |  |  |  |
| 1      | 0              | 1              | 0              | 0              | 1              | 0  |  |  |  |  |  |
| 1      | 1              | 0              | 0              | 1              | 0              | 0  |  |  |  |  |  |
| 1      | 1              | 1              | 1              | 0              | 0              | 0  |  |  |  |  |  |

The logical expression of the term Y0, Y0, Y2, and Y3 is as follows:

 $Y_3 = E.A_1.A_0$ 

 $Y_2 = E.A_1.A_0'$ 

 $Y_1 = E.A_1'.A_0$ 

 $YO = E.A_1'.A_0'$ 

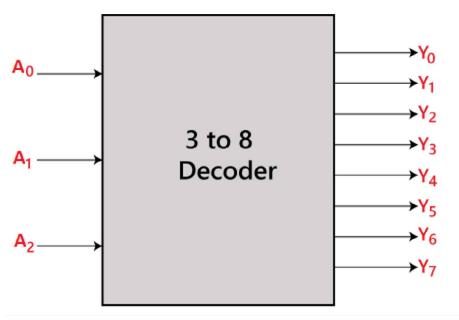

Logical circuit of the above expressions is given below:

# 3 to 8 line decoder:

The 3 to 8 line decoder is also known as **Binary to Octal Decoder**. In a 3 to 8 line decoder, there is a total of eight outputs, i.e.,  $Y_0$ ,  $Y_1$ ,  $Y_2$ ,  $Y_3$ ,  $Y_4$ ,  $Y_5$ ,  $Y_6$ , and  $Y_7$  and three outputs, i.e.,  $A_0$ ,  $A_1$ , and  $A_2$ . This circuit has an enable input 'E'. Just like 2 to 4 line decoder, when enable 'E' is set to 1, one of these four outputs will be 1. The block diagram and the truth table of the 3 to 8 line encoder are given below.

Block Diagram:

### **Truth Table:**

| Enable | ı              | NPUTS          | Outputs        |                       |                       |                       |                |                       |                |                |                |  |  |
|--------|----------------|----------------|----------------|-----------------------|-----------------------|-----------------------|----------------|-----------------------|----------------|----------------|----------------|--|--|
| E      | A <sub>2</sub> | A <sub>1</sub> | A <sub>0</sub> | <b>Y</b> <sub>7</sub> | <b>Y</b> <sub>6</sub> | <b>Y</b> <sub>5</sub> | Y <sub>4</sub> | <b>Y</b> <sub>3</sub> | Y <sub>2</sub> | Y <sub>1</sub> | Y <sub>0</sub> |  |  |

| 1      | 0              | 1              | 0              | 0                     | 0                     | 0                     | 0              | 0                     | 1              | 0              | 0              |  |  |
| 1      | 0              | 1              | 1              | 0                     | 0                     | 0                     | 0              | 1                     | 0              | 0              | 0              |  |  |
| 1      | 1              | 0              | 0              | 0                     | 0                     | 0                     | 1              | 0                     | 0              | 0              | 0              |  |  |
| 1      | 1              | 0              | 1              | 0                     | 0                     | 1                     | 0              | 0                     | 0              | 0              | 0              |  |  |
| 1      | 1              | 1              | 0              | 0                     | 1                     | 0                     | 0              | 0                     | 0              | 0              | 0              |  |  |
| 1      | 1              | 1              | 1              | 1                     | 0                     | 0                     | 0              | 0                     | 0              | 0              | 0              |  |  |

The logical expression of the term  $Y_0$ ,  $Y_1$ ,  $Y_2$ ,  $Y_3$ ,  $Y_4$ ,  $Y_5$ ,  $Y_6$ , and  $Y_7$  is as follows:

 $Y_0 = A_0' . A_1' . A_2'$ 

 $Y_1 = A_0.A_1'.A_2'$ 

 $Y_2 = A_0'.A_1.A_2'$ 

 $Y_3 = A_0.A_1.A_2'$ 

 $Y_4 = A_0' . A_1' . A_2$ 

 $Y_5 = A_0.A_1'.A_2$ 

 $Y_6 = A_0' \cdot A_1 \cdot A_2$ 

 $Y_7 = A_0.A_1.A_2$ 

Logical circuit of the above expressions is given below:

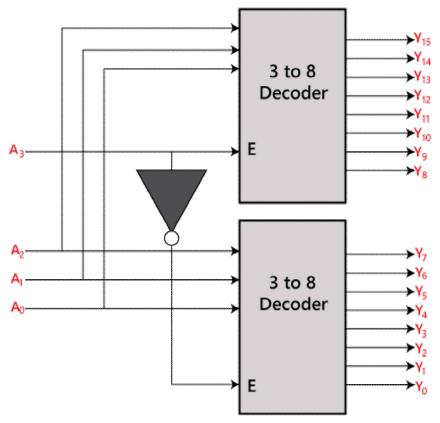

### 4 to 16 line Decoder

In the 4 to 16 line decoder, there is a total of 16 outputs, i.e.,  $Y_0$ ,  $Y_1$ ,  $Y_2$ ,.....,  $Y_{16}$  and four inputs, i.e.,  $A_0$ ,  $A_1$ ,  $A_2$ , and  $A_3$ . The 3 to 16 line decoder can be constructed using either 2 to 4 decoder or 3 to 8 decoder. There is the following formula used to find the required number of lower-order decoders.

Required number of lower order decoders=m<sub>2</sub>/m<sub>1</sub>

$$m_1 = 8$$
  
 $m_2 = 16$   
Required number of 3 to 8 decoders=  $\frac{16}{8}$   
= 2  
Block Diagram:

| 1                     | 1              | 1              | 1  | 1               | 0               | 0               | 0               | 0               | 0               | 0          | 0  | 0                     | 0              | 0                     | 0              | 0                     | 0              | 0  | 0  |

The logical expression of the term A0, A1, A2,..., A15 are as follows:

 $Y_0 = A_0' . A_1' . A_2' . A_3'$ 

 $Y_1 = A_0' . A_1' . A_2' . A_3$ 

 $Y_2 = A_0' . A_1' . A_2 . A_3'$ 

 $Y_3 = A_0'.A_1'.A_2.A_3$ 

 $Y_4 = A_0' \cdot A_1 \cdot A_2' \cdot A_3'$ 

 $Y_5 = A_0' . A_1 . A_2' . A_3$ 

 $Y_6 = A_0'.A_1.A_2.A_3'$ 

 $Y_7 = A_0'.A_1.A_2.A_3$ 

 $Y_8 = A_0.A_1'.A_2'.A_3'$ 

 $Y_9 = A_0.A_1'.A_2'.A_3$ 

 $Y_{10} = A_0.A_1'.A_2.A_3'$ 

 $Y_{11} = A_0.A_1'.A_2.A_3$ 

 $Y_{12} = A_0.A_1.A_2'.A_3'$ 

 $Y_{13} = A_0.A_1.A_2'.A_3$ 

 $Y_{14} = A_0.A_1.A_2.A_3'$ 

 $Y_{15} = A_0.A_1.A_2'.A_3$ 

Logical circuit of the above expressions is given below:
